Education

University of California, Santa Barbara · College of Creative Studies — **September 2024 – June 2027 (Expected)**

- Degree: **B.S. Computer Science**, GPA: **3.95**
- Relevant Coursework: Data Structures and Algorithms, AI Alignment, Operating Systems, Distributed Systems, Networks, Computer Architecture, Quantum Computing, Computer Security

Software Engineering Experience

Google · *Software Engineering Intern* — **June – September 2026**

- Developed automation-editing functionality for Ask Home in the Google Home app for Android (1B+ users), pioneering generative UI experiences powered by Google's A2UI framework in AI chat responses.
- Authored and presented a rigorous design doc built on continuous input from engineering, UX, and platform teams.
- Worked AI-first in 7 languages across multi-agent frameworks, Android/iOS frontends, and Home's backend.

Google · *Associate Software Developer Intern* — **June – September 2025**

- Developed a loyalty rewards center experience in Google Play Store for Android, enhancing UX for its 2.5+ billion monthly active users across 190+ markets worldwide.
- Worked across Play's full Java/Kotlin stack to implement loading, filtering, and sorting in a high-traffic environment.
- Designed and implemented a new UI element spanning the full stack for a loyalty program event page.
- Wrote detailed doc on implementation paths/tradeoffs for an upcoming feature using unconventional technology.

Daily Nexus · *Android App Developer* — **October 2025 – June 2026**

- Developed the first Android app for the *Daily Nexus*, the premier award-winning newspaper at UC Santa Barbara.
- Designed a modular, multiplatform-ready architecture with Decompose and Koin, and used it to implement local SQLite caching, efficient pagination, and an elegant Material 3 UI for comfortable browsing.

***FIRST* Robotics Competition Team 1678: Citrus Circuits** · *Scouting Front-End Developer* — **August 2021 – June 2024**

- Led design and implementation of Android and desktop apps in Kotlin for a world-leading FRC robot scouting system, bringing the team to first place in its world championship division in 2022-2024.
- Wrote whitepaper on the scouting system's architecture and design, now a role model for other teams.

Selected Projects

PyRTLSweeper · *Solo Developer* — **May – November 2025**

- Developed a Python package that compiles any combinational logic circuit into a Minesweeper board which simulates the circuit's logic when solved, and presented a paper, poster, and talk on the project at a conference.

升级 (*sheng ji*) Display · *Solo Developer* — **March – September 2024**

- Created a Compose Multiplatform (Android, Windows, Linux, web) app showing everyone at a table key info during a round of 升级 (*sheng ji*), a family of classic Chinese card games that bring people together.
- Built a website using Astro with Svelte, featuring complex scroll-based animations, to showcase the app's features.

Computing Skills

Languages	Kotlin, Java, Python, C, C++, HTML, CSS, JS, TS, Dart, Go, LaTeX, Typst, Protobuf, Starlark
Libraries/Frameworks	Jetpack Compose, Compose Multiplatform, Decompose, Dagger, Hilt, Koin, Room, JUnit, React, Vue, Svelte, Astro, Next.js, Nuxt, Redux, Tailwind CSS, Google Apps Script, A2UI
Tooling	Google Gemini (internal/external), ChatGPT, Ollama, Git, GitHub, Jujutsu, Cloudflare, AWS, Google Cloud, MongoDB, Oracle Cloud, Docker, Figma, npm, Yarn, pnpm, Vite, Vercel, Renovate, Zsh, Alacritty, adb, IntelliJ IDEA, Visual Studio Code, Kate, mise, just, zoxide
Operating Systems	Linux (Fedora, KDE neon, Kubuntu), Android, Windows, ChromeOS, iOS, iPadOS, macOS
Other Software	Firefox, Thunderbird, Tailscale, GIMP, Inkscape, Discord, Slack, Obsidian, Kdenlive, F-Droid
